C++

组合与继承

创客学院 荣荣老师

- 1/ 面向对象
- 2/ 组合
- 3 / 继承

class: public: []

作为组成成为,还是是好(他整个是强

面向对象 (OOP)

我想飞!

组合

```
点
class Point{
public:
       Point(int x, int y){
              this->x = x;
              this->y = y;
       int x;
       int y;
```

组合

```
线
class Line{
public:
       Line(Point &a, Point &b)
             :start(a),end(b)
       Point start;
       Point end;
```

继承(基类,派生类)

有粗细的线 class xLine: public Line{ public: xLine(Point &start, Point &end, int width=10) : Line(start, end){ this->width = width; int width;

扫一扫, 获取更多信息

THANK YOU
